

Fluent Order Management Connector for Adobe Commerce

**Inventory and order management for the speed of today's commerce.
Cloud-native and ready to adapt at the speed of today's tech.
From an Adobe Premier Partner for speedy implementation.**

KEY BENEFITS

Reduce oversells and undersells

Fluent provides you all the tools to sell more of what you have and avoid promising what you don't

Low-code for high adaptability

Fluent OMX (Order Management Experience), the only low-code framework for order management, rapidly adapts Fluent Commerce to your business

Supercharge your in-store processes

Start by configuring pre-built templates such as ship-from-store and in-store returns, then extend to match your precise needs

Market-validated experience

Fluent's OMS enables tens of billions of dollars in annual transactions, from luxury to loungewear, DTC to department stores

Connect directly with Adobe Commerce

New and existing Adobe Commerce customers can rapidly adopt omnichannel capabilities with the Connector.

When you integrate Fluent Order Management with Adobe Commerce, you can make the whole of your business much stronger than the sum of its parts.

Make more accurate promises of what's in stock and when and how the customer can get it with inventory orchestration across your WMS, drop ship vendors (DSVs) and third-party logistics (3PLs). If you also fulfill from stores, pick and pack the right orders at the right time with a state-of-the-art webapp.

Our platform supports your unique business logic needs with a library of rulesets to borrow from or add to. And because the world's changing so quickly, you'll appreciate how it's easier to adjust than the typical OMS.

You've put a lot of effort into making Adobe Commerce look great to your customers. Now extend that quality experience to what you promise and deliver with Fluent Order Management.

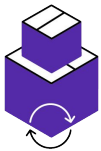

**Let Fluent show you a better way
to manage omnichannel orders.**
